Reasons for allowance

The following is an examiner's statement of reasons for allowance:

1. In response to Applicant's terminal disclaimer filed on 07/19/04, the double patenting rejection made in the last Office action on the U.S Patent No. 6,670,848 is withdrawn

2. The present invention is drawn to an apparatus a number of amplification modules, a power detector, a gain control device and a pre-amplification module recited in claims 1-4. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: "the power detector coupled to at least one of the number of amplification modules ... of an output level of the received differential mode output signal" and "the gain control device coupled to the power detector and to each of the number of amplification modules ... provide the number of gain control signals to each of the number of amplification modules" in combination with "the number of amplification modules ... to produce a differential mode output signal" as recited in claim 1.

The prior art references submitted by the applicant on IDS form received on 09/10/03 was reviewed and considered. However, as noted above, the combination of "the number of amplification modules", "the power detector" and "the gain control device" is not disclosed. Therefore, the claims are patentably distinct over all these prior art references of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
